

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also, come from gas stations, urban storm water runoff, and septic systems.

Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. The US Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

What is the source of my drinking water?

The primary source is a treated reservoir located on the mountain. We also have 2 gravel pack wells.

The complete Assessment Report is available for review at *Goffstown Village Precinct*. For more information, call **Lee Minnich at 497-3621** or visit the DES Drinking Water Source Assessment website at <http://des.nh.gov/organization/divisions/water/dwgb/dwssp/dwssp.htm>.

How can I get involved?

Monthly Board meetings are held the Second Tuesday at 6 pm, all are welcome. For more information about your drinking water, please call the office at 603 497-3621.

Violations and Other information:

See violation list in table.

Why are contaminants in my water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Do I need to take special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

Source Water Assessment Summary

DES prepared drinking water source assessment reports for all public water systems between 2000 and 2003 in an effort to assess the vulnerability of each of the state's public water supply sources. Included in the report is a map of each source water protection area, a list of potential and known contamination sources, and a summary of available protection options.

The results of the assessment, prepared in 2002, are noted below.

White Brook Reservoir, one susceptibility factor was rated high, two were rated medium, and eight were rated low.

Well Supply, one susceptibility factor was rated high, one was rated medium, and ten were rated low.

Note: This information is over fifteen years old and includes information that was current at the time the report was completed. Therefore, some of the ratings might be different if updated to reflect current information. At the present time, DES has no plans to update this data.

2018 Consumer Confidence Report

Goffstown Village Precinct 0911010

Introduction

Like any responsible public water system, our mission is to deliver the best quality water. Aging infrastructure presents challenges to drinking water safety, and continuous improvement is needed to maintain the quality of life we desire for today and for the future.

We have upgraded water pipes throughout the town. In the coming year we intend to replace 125yr old watermain in Shirley Park.

These investments along with on-going operation and maintenance costs are supported by user rates. When considering the high value we place on water, it is truly a bargain to have water service that protects public health, fights fires, supports businesses and the economy, and provides us with the high-quality of life we enjoy.

What is a Consumer Confidence Report?

The Consumer Confidence Report (CCR) details the quality of your drinking water, where it comes from, and where you can get more information. This annual report documents all detected primary and secondary drinking water parameters, and compares them to their respective standards known as Maximum Contaminant Levels.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

NOW IT COMES WITH A LIST OF INGREDIENTS.

GOFFSTOWN WATER PRECINCT

Contaminant	MCL	Reservoir	Well #1	Well #2	Violation	Health Effect	Common sources of contaminant in drinking water
Barium	2 ppm	.006 ppm	0.01 ppm	0.008 ppm	N	Increase in blood pressure	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Arsenic	10 ppb	1 ppb	---	---	N	Skin Damage or problems with circulatory system, may increase cancer risk	Erosion of natural deposits; runoff from orchards; runoff from glass & electronics production wastes
Iron	300 ppb	250 ppb	20 ppb	920 ppb	N	Secondary Standard is a non-enforceable guideline regarding contaminants that may cause cosmetic effects skin or tooth discoloration) or aesthetic effects (taste odor or color) in drinking water.	Erosion of natural deposits
Manganese	50 ppb	48 ppb	90 ppb	40 ppb	N	Secondary Standard is a non-enforceable guideline regarding contaminants that may cause cosmetic effects skin or tooth discoloration) or aesthetic effects (taste odor or color) in drinking water.	Erosion of natural deposits
Sodium	60 mg/L	11 mg/L	17 mg/L	21 mg/L	N		
Zinc	5 mg/L	0.012 mg/L	0.012 mg/L	0.006 mg/L	N	Secondary Standard is a non-enforceable guideline regarding contaminants that may cause cosmetic effects skin or tooth discoloration) or aesthetic effects (taste odor or color) in drinking water.	Erosion of natural deposits
Chloride	250	17	28	30	N	Secondary Standard is a non-enforceable guideline regarding contaminants that may cause cosmetic effects skin or tooth discoloration) or aesthetic effects (taste odor or color) in drinking water.	Erosion of natural deposits
PH	6.5-8.05	6.3	5.96	5.99	N		
Chromium	---	<.001	0.001	0.001	N		
Nitrate	10 mg/L	0 mg/L	0 mg/L	1.6 mg/L	N	Infants below the age of six months who drink water containing nitrate in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue-baby syndrome	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
System Samples							
THM	80 ppb	16 ppb			N	Liver, Kidney, or thyroid problems; increased risk of cancer	Byproduct of drinking water disinfection
Haa5	60 ppb	10 ppb			N	increased risk of cancer	Byproduct of drinking water disinfection
	MCL	90th Percentile	Date	# of sites above AL			
Lead	15ppb	7 ppb	2016	0	N	Infants and Children: Delays in physical or mental development: children could show slight deficits in attention span and learning abilities: Adults; Kidney problems; high blood pressure	Corrosion of household plumbing systems; erosion of natural deposits
Copper	1.3 ppm	.71 ppm	2016	0	N	Short term exposure; gastrointestinal distress: Long term liver or kidney damage. People with Wilson's Disease should consult their personal doctor if the amount of copper in their water exceeds the action level	Corrosion of household plumbing systems; erosion of natural deposits

Definitions Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Abbreviations: BDL: Below Detection Limit mg/L: milligrams per Liter NA: Not Applicable ND: Not Detectable at testing limits
 NTU: Nephelometric Turbidity Unit pCi/L: picoCurie per Liter ppb: parts per billion ppm: parts per million
 RAA: Running Annual Average TTHM: Total Trihalomethanes UCMR: Unregulated Contaminant Monitoring Rule ug/L: micrograms per Liter
